

How do I know if my **BABY (Birth-3 years old)** **Needs Occupational Therapy services?**

- My baby is more than 2 months behind in 2 or more developmental skill areas
- My baby does not smile at people or watch things move nearby, by 2 months old
- My baby does not show affection for caregivers by 6 months old
- My baby seems very stiff, with tight muscles
- My baby seems very floppy, like a rag doll
- My baby resists trying new tastes or textures of food
- My baby does not transfer toys from one hand to the other, by 9 months old
- My child does not learn gestures like waving or shaking head, by 1 year old
- My child does not sleep through the night, by 1 year old
- My child does not point to show things to others, by 18 months old
- My child does not put things into containers or take out, by 18 months old
- My child does not know what to do with common things like a brush, phone, spoon, by 2 years old
- My child does not scribble, by 2 years old
- My child cannot stack 4 blocks, by 2-1/2 years old
- My child does not seem to be aware of other children playing nearby, by 3 years old
- My child has lost skills he/she previously had

If your child is experiencing 3 or more of these problems, occupational therapy intervention may be helpful. Contact our facility for more information.
